### **Evaluating Functions from a Numerical Perspective (GIVEN A TABLE OF VALUES)**

#### **Target 1: I understand and can read function notation.**

Explain in words what the following statements written in function Notation mean:

1.  $f(1)$ : Find the output of  $f(x)$  when the input is  $x=1$
2.  $f(a)$ : Find the output of  $f(x)$  when the input is  $x=a$
3.  $f(x) = 8$ : The output of  $f(x)$  is 8 when the input is  $x$
4.  $f(3) + g(2)$ : Find the sum of  $f(x)$ 's output when input is  $x=3$  and  $g(x)$ 's output when input is  $x=2$
5.  $f^{-1}(0)$ : Find the output of  $f^{-1}(x)$  for an input of  $x=0$  or find input of  $f(x)=0$
6.  $f(g(-2))$ : Find  $f(x)$ 's input evaluated at the output of  $g(-2)$

#### **Target 2: Given a table I can determine outputs of a function given a specified input and vice-versa.**

x	-1	0	1	2	5
$f(x)$	7	6	7	10	31

<b>EXAMPLE 1 :</b> Determine the value of $f(1)$ $f(1) = \underline{7}$ <i>Justification:</i> $f(1)$ is asking you to find the output for the $f(x)$ function when the input ( $x$ value) is 1. From the table the output ( $f(x)$ ) at an $x$ value of 1 is 7.	<b>EXAMPLE 2:</b> Determine $x$ if $f(x)=6$ $x=\underline{0}$ <i>Justification:</i> $f(x)=6$ is asking you to find the input ( $x$ -value) of the $f(x)$ function when the output is 6. According to the table an input of $x=0$ had an output of 6.
--	---

7.  $f(0) = \underline{6}$

8.  $f(-1) = \underline{7}$

9.  $f(5) = \underline{31}$

10. Determine  $x$  if  $f(x) = 10$

11. Determine  $x$  if  $f(x) = 7$

12.  $f^{-1}(31) = \underline{5}$

$x=2$

$x=-1 \text{ or } 1$

#### **Target 3: I understand how to evaluate combinations and compositions of functions given a table of values.**

Use the table below to answer questions 13 and 14

x	$f(x)$	$g(x)$
-1	$\frac{1}{2}$	2
0	4	-1
$\frac{1}{2}$	$\frac{3}{2}$	0

13.  $f(g(\frac{1}{2})) = \underline{4}$

14.  $f^{-1}(\frac{3}{2}) = \underline{1/2}$

Given the following table of values for the functions  $f(x)$  and  $g(x)$ , and  $k(x)$  determine the following:

$x$	-4	-3	-2	0	$a$	2	3	5	$h$	$a+h$
$f(x)$	-3	$a$	2	-2	-3	5	-1	3	-2.5	-3.5
$g(x)$	3	2	2	-2	-1	0	2	-4	-1.5	-2
$k(x)$	.5	-4	$a$	2	-3	0	-1	3	3	3

15. $f(0) = \mathbf{-2}$	16. $4k(5) = \mathbf{12}$	17. $f(-4) + g(2) = \mathbf{-3}$
18. $\frac{3g(-3)}{k(a)} = \mathbf{-2}$	19. $f(-2) - 4g(3) = \mathbf{-6}$	20. $\frac{f^{-1}(3)}{k^{-1}(a)} = \mathbf{-5/2}$
21. $k(-2) + 3g(a) = \mathbf{a-3}$	22. $k(g(2)) = \mathbf{2}$	23. $g(f(-3)) = \mathbf{-1}$
24. $k(g(-2)) = \mathbf{0}$	25. $g^{-1}(f(3)) = \mathbf{a}$	26. $f(k(a)) = \mathbf{a}$
27. $k(g(f(2))) = \mathbf{.5}$	28. $g(k(f(a))) = \mathbf{3}$	29. $g(f(g(-3))) = \mathbf{-4}$
30. If $k(x) = 2x + 10$ , then for what value(s) of $x$ is $k(x) = f(g(k(a)))$ ?  $X=-5/2$	31. $f(a) + f(h) = \mathbf{-5.5}$	32. Is $f(a) + f(h) = f(a + h)$ ?  <b>No, <math>-5.5 \neq -3.5</math></b>
